

Executive Summary

The **ineTeam** sports matchmaking platform has undergone a significant architectural and UI overhaul. The primary objective was to transition from a generic player-matching system to a structured **Team-Based Matchmaking** architecture, enhancing user engagement and competitive clarity.

UI CONSISTENCY

Key Technical Changes

Architecture Shift

Implemented a dual-team structure (Team A vs Team B) across all match entities, allowing for explicit team selection during joining.

LOGIC FIRESTORE

UI Unification

Consolidated MatchCard and Match Detail screens to provide a seamless visual experience between "Home" and "My Matches".

UX/UI STYLING

Provider Stability

Enhanced MatchProvider with robust stream management and explicit state cleaning to prevent data leakage between sessions.

PERFORMANCE

SAFETY

Core Features Implemented

- ✓ **Unified Match Discovery:** A single, high-performance card design used across the application.
- ✓ **Explicit Team Joining:** Users can now choose to join Team A or Team B, with immediate UI feedback.
- ✓ **Team Balance Visualization:** Integrated `TeamBalanceView` to show player distributions in real-time.
- ✓ **Dynamic Sport Filtering:** Improved filtering system with real-time updates and search functionality.
- ✓ **Creator Management:** Enhanced visibility of "Created by Me" vs "Joined" matches in the user profile.

Architecture Highlights

The matchmaking logic now resides in a dedicated `MatchmakingService`, calculating skill distributions and ensuring fair play. The `MatchProvider` acts as the central state hub, managing Firebase streams with optimized refresh rates.
